EXPERIENCE, PROJECTS, AND LEADERSHIP

Design Engineer – Turboprops, Textron Aviation | 2023 – 2024, Intern & CoOp | 2024 – Present, Full Time

King Air Bleed Air Shutoff Valve Certification Program | 2025 – Present

- Project lead for FAA major certification: redesigned bleed air shutoff valve for B200/B300 King Air reliability.
- Developed and submitted the FAA certification plan, led the FAA pre-TCB meeting, and resolved FAA comments.
- Run weekly stakeholder meetings and coordinate supplier cert/qual documentation.
- Completed conformity documentation for certification testing.
- Leading RTCA DO-160 certification bench testing and supporting flight test activities.
- Kept the program on track through a full change of unit members.

METS Autothrottle Tiger Team | 2025 – Present

- Coordinated autothrottle over-torque triage and engineering release with Special Missions Project Engineering.
- Enabled 3rd- and 4th-quarter 2025 METS deliveries to the U.S. Navy.
- Coordinated engineering analysis and improvements with the supplier and supported flight testing.
- Used MATLAB, Simulink, Python, and system identification to analyze autothrottle behavior.
- Selected to present Textron's over-torque findings and path forward to U.S. Navy stakeholders at the Technical Summit (Patuxent River, MD), coordinating Special Missions, Propulsion, and Program Management input.
- Completed initial design of a new throttle cable concept and transitioned it to a summer intern in propulsion engineering.
- Preparing patent paperwork for an autothrottle concept.

QAB & Quality Escape Coordination | 2024 – Present

- Lead engineering coordination for QAB items across King Air, Caravan, and SkyCourier fleets.
- Work with Quality, COS, and unit members on hazard classification and field actions.
- Reduced King Air and SkyCourier QAB engineering backlogs.
- Developed an improved internal Engineering process for handling quality escapes.
- Provide engineering review of QAB-related service documents with Technical Publications.
- Represent Engineering at QRB/SOQ meetings and presented multiple safety issues to COS.

CTI Product Improvements & Fleet Support | 2024 – Present

- Completed CTI and product improvement projects, including the McCauley Ballast Kit production and field kit.
- Resolved obsolescence issues, including brake iron and ECS refrigerant.
- Worked B300 Enviro ECS improvements (cold-soak heating, electric A/C, single-engine ops) and troubleshot Temperature Modulating Valve oscillations.
- Resolved an AC hose fitting obsolescence grounding multiple aircraft with a BS1000 substitution that cleared current and future AOGs.
- Contributed to B300 EBOM Digitization Effort.
- Coordinated engineering flight test plans for multiple CTI development programs, aligning test plan with design, Flight Test, and Production Flight teams.

Production & Delivery Support | 2024 – Present

- Troubleshoot aircraft systems at Production Flight (ACC), including ground and air aborts, to support on-time deliveries.
- Resolved issues including a rudder boost quality impound, hydraulic landing gear issues, throttle cable issues and ECS troubleshooting.
- Worked productivity and production-support EECRs, including the cargo door and McCauley Ballast Kit.

Engineering Digital Tools & Process Improvement | 2024 – Present

- Designed, coded, and deployed TurboLink, replacing shared Excel project tracking for all turboprop models.
- TurboLink tracks 809 EECRs, 167 EDCRs, and 127 QAB/COS items; presented to senior engineering leadership and program management staff.
- Moved TurboLink to a dedicated IT server and put it under GitHub version control.
- Streamlined EECR/EDCR workflows and standardized project communication.
- Developing TurboLink 2.0, a React/Material UI web app with enhanced reporting, QAB metrics, and CTI prioritization.
- Built the King Air Digitization Power BI dashboard tracking 3D model, drawing, and loft release burndowns as well as contributor support metrics.
- Coordinated SkyVault beta testing, bug logs, and feature requests with IT for Sustaining Engineering.

TECHNICAL SKILLS

Project & Certification: FAA certification (major/minor), Textron ODA processes, RTCA DO-160 testing, conformity, supplier coordination, project management, flight test support, Beechcraft change processes (Enovia V6)

Engineering & Analysis: CATIA V5, MATLAB/Simulink, Python, system identification, FTReader/FTWeb, Power BI, SQL/database development, Microsoft Access, React, technical documentation, data analytics and controls

Digital Engineering: Microsoft Copilot / Copilot Studio, GitHub Copilot, LLM/AI agents, engineering workflow automation, Power BI dashboards, Asana, 3D printing

EDUCATION, CERTIFICATIONS, AND RECOGNITION

M.S. in Aerospace Engineering, Wichita State University (In Progress)

B.S. in Mechanical Engineering with Aerospace Focus, Minors in Mathematics and Applied Sciences
LeTourneau University, May 2024

Young Professional at a Major Employer, Wichita Business Journal — 2026; selected by Textron Aviation

Private Pilot Certificate, Instrument training in progress at the Textron Aviation Employees Flying Club

Together Mentorship Program, Textron Aviation (Mentee, Year 2)
Textron University Courses: Crucial Conversations; 7 Habits of Highly Effective People; Flight Controls for Engineers; Fatigue and Damage Tolerance for Engineers; Customer Service for Engineers

LEADERSHIP & INDUSTRY INVOLVEMENT

Engineering AI Council & Copilot Champion

- Sustaining Engineering representative on the Engineering AI Council.
- Provide beta feedback on the EI Chatbot and build agents with Copilot Studio and GitHub Copilot.
- Lead a cross-organization effort to bring Beechcraft documentation into AI tools.

Training & Knowledge Sharing

- Top 10 Engineering Wiki contributor (2025).
- Developing curriculum for a Textron University course, “Intro to Python for Engineers.”
- Updated Major Change training material for the King Air team with ODA guidance.
- Secured the department’s first 3D printer, wrote the user guide, and trained users.

University Recruiting & Intern Development

- Plant IV Intern Champion (2026); coordinated the Sustaining Engineering tour for 140+ interns.
- Hosted three engineering shadow opportunities and presented in the Career Exploration Series.
- Represented Textron Aviation at LeTourneau University recruiting (2024–2026) and ASME/IEEE career events.
- Conducted 14 interviews for intern and full-time roles in 2026.
- Trained the 2025 summer intern, now an incoming new hire.
- Selected to train the 2026 King Air sustaining new hire, focusing on mechanical systems design.

Community & ERG Involvement

- Takeoff ERG Programming Council: planning committees for young professionals at Textron Aviation.
- K-12 & SkillBridge outreach: plant tours, engineering panels, and Manufacturing Day activities.
